Hand-over Report

Date: 20/10/2021

Time: 3:00pm

Location: UWA Business School

Things mentioned:

1) Two links for client are provided:
https://github.com/Hanchooi/Integrator-for-Client (For Data Integrator)
https://github.com/Hanchooi/TrackerApp-for-Client (For TrackerApp)

2) We showed our client a demo of both TrackerApp and Data Integrator with our PC and devices.

3) We tried installing the Data Integrator on client's PC but we didn't manage to install gpx_convertor due to client's PC permission issue.

4) Due to time constraint, we couldn't help our client resolve the issue in time. However, Data Integrator can be run in client PC successfully if input does not include a gpx file.

5) Client doesn't have time to meet us until next Thursday. Therefore, we will meet client on 28th October to help client fix this issue. After some investigation we suspect we only need to upgrade client's brew and uses "sudo" and "user" for gpx_converter installation.

Planning to try:

brew upgrade

sudo pip3 install gpx_converter or sudo pip3 install gpx_converter --user
