# User Manual for Integrator

step 1: Go to the Data Integrator with GUI folder, double click <runGUI.command>. The integrator page will appear.

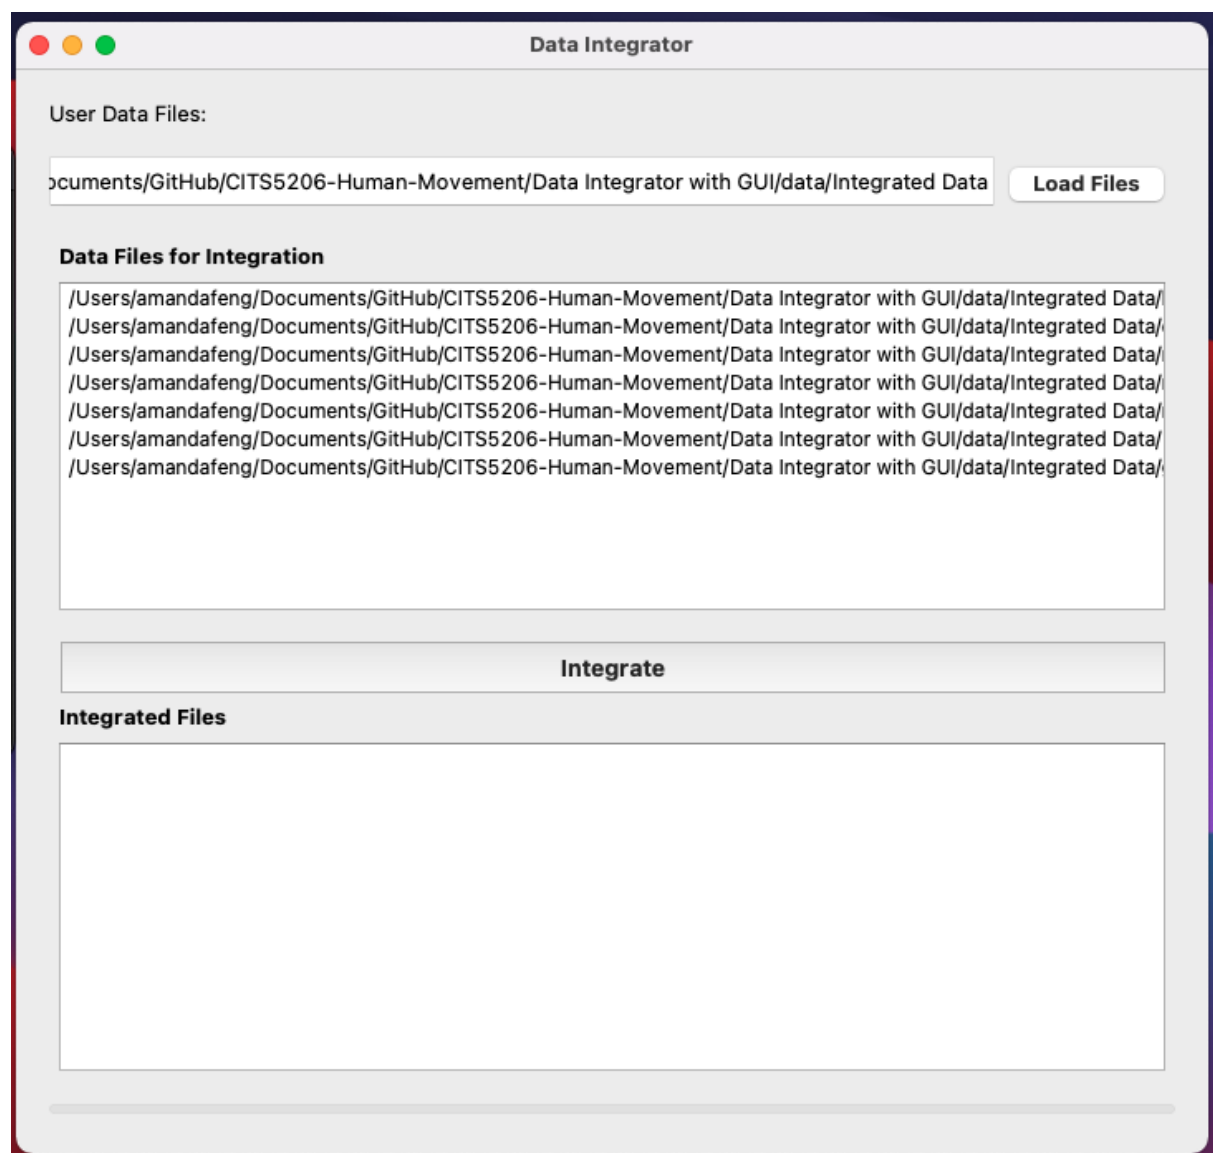

Step 2: Click the <Load File> bottom, finder will pop up for you to select files. There are 3 types of data (.gpx, .csv, .json)can be selected. (The name has already pre-set, please do not rename the files while integrating them.)

Only files named <location.csv>, <records.csv> or <username_records*.csv>, <visited_places.csv>, <garmin_gpx.gpx> will be integrated.

visited_places.csv	118 bytes	CSV Document	
username-records2.csv	4 KB	CSV Document	
username-records1.csv	4 KB	CSV Document	
locations.csv	66 bytes	CSV Document	
garmin_gpx.gpx	149 KB	GPX File	

This integrator assumes every integration will include <records.csv> or <username_records*.csv> (if there is no such file, the integration may fail).

Step 3: After file being selected, click the <Integrate> bottom.

Step 4: Go to the <Data Integrator with GUI> folder, find the output folder. You'll find the integrated data.
